Virtual Art, Agriculture and Crafts

Part of the
Tuesday Webex Workshops Series (age: adult)
Join us on Tuesday, July 21th at 7pm, to explore the arts, agriculture and crafts in virtual spaces

Are you wondering how you can use technology to your advantage to continue to connect with youth and work with them on their art, agriculture and craft projects?

Working virtually with youth and their projects can prove to be quite challenging, but with this challenge comes many opportunities. We will explore what tools are being used to connect with youth in a different way while continuing to provide a platform to learn and grow as individuals and in their projects.

This Webinar is designed to explore what is available to help plan fun and educational virtual meetings with youth with non-animal projects. Although we are apart from each other, we can all still learn to use the available tools to our advantage and, in true 4-H fashion, make the best better!

Whether it’s the weather, transportation or the need for social distancing, virtual 4-H spaces can be a useful, fun and effective tool in the positive youth development shed. UConn 4-H continues to explore new ways to experience activities that foster belonging, mastery, independence and generosity.

UConn 4-H: Growing Real in Virtual Spaces
